EDUCATION

Maharaja Agrasen Institute Of Technology (MAIT)

2025 – 2029

Bachelor of Technology in Computer Science and Engineering – AI

Kendriya Vidyalaya

2024 – 2025

Senior Secondary (PCM + Computer Science) – CBSE

PROJECTS

Delhi Next-Day AQI Classifier — Python, pandas, scikit-learn

[GitHub](#)

- Built a time-split classifier for tomorrow's CPCB PM2.5 bucket in Delhi from today's Open-Meteo air and weather (daily table, 2023–2026). Today's PM2.5 stays a feature; no random shuffle.
- Persistence (tomorrow = today's class) beat logistic regression and HistGradientBoosting on the holdout (0.55 acc / 0.54 balanced vs 0.52 / 0.45). Neighbouring CPCB buckets sit close — 90% accuracy would mean leakage.
-

Namakemono — MacroDroid, Playwright, Gemini AI API, Pinterest Scraping

[Demo](#)

- Engineered a fully automated end-to-end social media pipeline that scrapes images from a Pinterest feed, transfers them to a secondary Android device, and autonomously posts to X (Twitter) every 2 hours without manual intervention..
- Integrated Gemini AI to generate contextual captions for each scraped image, automating the entire content creation workflow from image sourcing to caption writing to publishing
- Orchestrated device-level automation using MacroDroid to schedule phone wake cycles, handle image uploads, trigger posting sequences, and power off the screen — building a self-sustaining posting loop that gained 700+ impressions and 25+ likes organically.

AI CLI Assistant — Python, Gemini AI API, OpenWeatherMap API, pyttsx3, pyjokes

[GitHub](#)

- Developed a feature-rich CLI chatbot integrating Gemini AI as a fallback engine, enabling intelligent responses to unrecognized commands with real-time AI processing.
- Engineered multi-modal input support with voice recognition and text-to-speech output, alongside weather intelligence features including AQI, UV index, outfit recommendations, and 5-day forecasts..
- Built modular utility features including a unit converter (temperature, length, weight), arithmetic calculator, interactive games (Rock Paper Scissors, Number Guessing), and persistent chat memory with timestamped conversation history.

TECHNICAL SKILLS

Languages: Python , C

Web : Html , Css

Machine Learning : NumPy, pandas, scikit-learn, Matplotlib, Jupyter Notebook; data cleaning and visualization; currently studying Hands-On Machine Learning (HOML) and Deep Learning

Tools: Git , Linux , Onshape

Database: Mysql

Achievements

- Top 5 Finalist – Codex Hackathon
- Participated many hackathons – Smart India Hackathon (SIH) , codex hackathon , ai prompt wars and more .
- Codeforces Rating: 777 (Peak: 902)

SUMMARY

First-year CSE-AI student at MAIT. Builds Python apps with APIs and time-aware ML (Delhi next-day AQI). Currently studying Hands-On Machine Learning and Deep Learning, with a focus on turning ideas into practical products.
